Shahzeb Siddiqui

+91-9919756565 | sendtoshahzeb@gmail.com| LinkedIn | India

Skills

Languages: Node.js, JavaScript, Typescript
Frameworks: React.js, Next.js, Express.js
Database: Postgres, Redis, DynamoDB, SQL
Cloud: AWS, Lambda, APIGW, Elasticache, Secrets Manager, CloudWatch, EC2
Tools: Git, Kafka, Docker, CMS, Postman, IAAC, Datadog, SonarQube, Jenkins
Other: Backend development, full stack development, microservice architecture

Experience

Eventbrite Remote
Software Engineer 2 *July 2023 – Present*

- Mentored interns and junior engineers (SDE1), providing technical guidance, code reviews, and career support to foster team growth and engineering excellence.
- Drove end-to-end project execution across multiple initiatives—managing stakeholders, planning releases, coordinating communication, maintaining documentation, and leading post-release monitoring for continuous improvement.
- Architected and led development of the Venue Finder Service, a scalable solution for event creators to discover top venues by location and event type. Built with DynamoDB, API Gateway, and AWS Lambda.
- Built and led delivery of a self-serve Landing Pages platform for the marketing team using Contentful CMS, Next.js, AWS, and CloudFront. Eliminated 100% engineering dependency, reducing marketing campaign launch time from days to minutes and serving millions of page visits per day efficiently
- Led phased migration of the Landing Pages app from a monolithic legacy system to a modern Next.js stack, using Edge-based computation to intelligently route traffic. Achieved seamless migration with zero downtime and improved scalability.
- Collaborated with Data and Marketing team to improve and personalize onboarding experience leading to 30% increase in high quality lead generation.
- Optimized mobile-friendly CTAs, boosting contact sales and signup CTR by 18% on mobile.
- Automated pipelines for sitemap generation for search pages and indexation logic.
- **Tech stack** – Python, NodeJS, ReactJS, NextJS, Redis, DynamoDB, MySQL, AWS, Serverless

DLT Labs Noida
Software Engineer *Oct. 2020 – July 2023*

- Successfully developed and deployed aggregation service for a multi-tenant asset tracking platform. Functionality of this service included aggregation on attributes of an object moving in a workflow (path for a product moving in its delivery cycle). Execution plan included writing a Kafka event-based service using Nest framework, which performs desired logical operations based on the message received from topics. Also perform CRUD operation on DB (Postgres).
- Developed and deployed new micro-services and upgrading existing ones for the project - DL Asset Track (the flagship project of DLT Labs) which tracks back the movement of an asset throughout its lifecycle in a supply chain.
- Implemented better coding standards by setting up docker containers for Jenkins and SonarQube for development team to check and analyze code quality for Nodejs services. Wrote a Jenkins pipeline to checkout code from Bitbucket server, install dependencies, run unit tests and create docker image from the checked-out source code if code quality is up to the set standards in SonarQube else fail the build.
- Implemented new asynchronous version for transaction API for asset transfer a leading to improved user experience.
- Wrote multiple articles/blogs on Kubernetes as an initiative to foster knowledge sharing and promote use of orchestration technology.
- **Tech stack** – NodeJS, Kafka, Typescript, Redis, CouchDB, ELK, Postgres, AWS, Hyperledger Fabric

Education

KIET Group of Institutions, Ghaziabad, India Jun. 2016 – July 2020
Bachelor of Engineering in Computer Science and Engineering *CGPA – 8.0/10.0*
